

Pastomaster HE

ADAPTIVE EXCHANGER PUMP

THE INTELLIGENT TECHNOLOGY THAT
TAKES SPECIAL CARE OF YOUR MIX

Pastomaster HE
High Efficiency.
Unique.

Pasteurization

Controlled heat treatment discovered in 1864 by French scientist Louis Pasteur to sanitize food by killing pathogenic microbes without causing the deterioration of vitamins and proteins. In other words, purifying while preserving the food's nutritional value, taste, and aroma.

> GELATO AND YOGURT MIXES

9 basic programs to produce **all kinds of basic and complete gelato mixes and yogurt**

**High
Pasteurization
85 °C**

The most frequently used, for maximum guarantee of food safety.

**Low
Pasteurization
65 °C**

A more delicate cycle, to respect ingredient taste and texture.

**Intermediate
Pasteurization**

Choose any pasteurization temperatures between 65 °C and 95 °C.

**Chocolate
Pasteurization
90 °C**

For chocolate mixes. This cycle melts chocolate perfectly while bringing out its aroma.

**Cooling
Aging**

Cooling at 4 °C, storage, and aging, without heating.

**Sugar
Syrup**

To produce the syrup used in water-based mixes.

**Inverted
Sugar**

To produce the sweetener used to reduce solids without eliminating sweetness.

**Liquid
yogurt**

To produce drinkable yogurt with milk and cultures.

**Dense
yogurt**

To produce an excellent yogurt that is dense and creamy.

> SAUCES*

Programs to produce 7 sauces that together with the base mixes can be used to quickly produce classic gelato flavors:

- Cream Sauce
- Zabaione Sauce
- Cocoa Sauce
- Fruit Sauce
- Chocolate Sauce
- Citrus Sauce
- Lemon Sauce

*Pastomaster 60 HE models only

> SPECIALTIES*

Programs to produce 6 artisanal specialties to offer in your gelato shop:

- Pudding
- Panna Cotta 1
- Panna Cotta 2
- Bavarian cream
- Semifreddo base
- Italian Meringue

*Pastomaster 60 HE models only

> FREE PROGRAMS

There are 5 free programs so that the gelato artisan can personalize and memorize proprietary pasteurization cycles.

CHEESE

8 programs to produce:

- Ricotta cheese
- Robiola cheese
- Soft cheese
- Hard cheese
- Special cheese
- Cooked whey
- Bulk starters
- Whey starters

MILK

Programs to produce:

- Heat treatment
- Scheduled heat treatment
- Low milk pasteurization (Low-temp)
- High milk pasteurization (High-temp)

The machine includes a recipe book with detailed recipes and information on ingredients that can be downloaded by scanning the QR Code on the front of the machine.

PERFORMANCE AND QUALITY

Exchange Pump

The ingredients are mixed and pasteurized inside the exchange pump cup, which is located on the tank bottom. This exclusive, patented Carpigiani technology guarantees:

High micronization: the millimetric cup-beater coupling and the different mixing speeds reduce the fat globules to particularly fine sizes, from 2 to 5 microns, for a gelato that is more creamy and stable.

Superior efficiency allows working even with minimum batches without the risk of burning the mix. Furthermore, the original dry bain-marie system avoids product buildup.

Raw Milk

The one-piece exchange pump, the new spigot design, and the specific conveyor* ensure the absolute safety of the mixes, even when using raw milk.

*for all models.
Also available as a spare part

Pastomaster 120 HE

The cooling system is divided into three parts, operating according to the quantity of mix being processed:

Min	30 – 60 liters
Med	60 – 90 liters
Max	90 – 120 liters

The removable **Standard Conveyor** is designed to accommodate dense and viscous ingredients, and produce mixtures with high solids content. It is also ideal for the production of sauces and cheeses. (The Removable Standard Conveyor is square shaped with smaller diameter for Pastomaster 60 and larger diameter for Pastomaster 120).

Cycle times

The thermal exchange per liter of mixture, heating to 85 °C and cooling to 4 °C, is extremely rapid: less than 2 minutes on the 60 HE model and less than 1 minute on the HE 120. With this technology, the energy consumption and the pasteurization times are directly proportional to the amount of mix being produced.

High Power*

Optional feature that allows you to save up to 20%** on heating times without increasing total energy consumption.

* Only available on Pastomaster 60 HE and Pastomaster 60 HE P models. Must be ordered at time of purchase. ** Compared to the standard version

> CONVENIENCE

New solutions
for maximum
ease of use

Lid and exchange pump

Brand new design lid, easy to assemble and disassemble. Thanks to the exchange pump, by opening the lid you can add the ingredients (while the mix is being stirred) working in complete safety.

Mixture Transport Kit

Optional kit designed to hygienically transfer mixtures.

Bucket shelf

Optional extra made of steel. Removable for easy washing.

Hose bracket

Thanks to the bracket located on the back of the machine it is possible to situate the water hoses so that they remain raised from the ground, thus facilitating easy movement and cleaning of the floor.

Water Filling*

New optional extra to **dispense the precise quantity of water** required by the recipe and/or for cleaning, saving time and avoiding quantity errors.

Scan the **QR Code** on the front of the machine to access the most up to date equipment information: Instruction Manual, Carpi Care kit & Carpi Clean kit.

*for all models. Must be ordered at time of purchase

> SAVINGS

Reduced consumption of water

high efficiency

Carpigiani **HIGH EFFICIENCY** technology, equipped with high-efficiency motors and high-performance condensers, providing maximum efficiency during pasteurization of the mixes. **Pastomaster HE** ensures generous savings in water consumption, **up to 30%** compared to RTX pasteurizers.

> SAFETY

More operational safety and increased control of production

Ergonomic design

Increased accident prevention with more rounded corners.

Lid

To avoid the spatter of boiling liquid, the beater stops moving if the lid is lifted when the mix is hotter than 50 °C.

Blackout and Water supply cutoff

After an electrical blackout or interruption of the water supply, if the temperature-time parameters can guarantee that the mix has not suffered the pasteurizer resumes the current program. Otherwise it automatically starts a new full pasteurization cycle, alerting the user with a message on the display.

During processing, when the temperature exceeds 50 °C the display turns red to alert the operator that inside the machine there are heated products. This visual cue helps prevent improper operations with hot products.

With **TEOREMA** you can monitor the machine via internet, PC, tablet, and smartphone. Technical service is facilitated thanks to the ability to remotely perform controls and diagnostics.

Pastomaster 60^{HE}

HIGH PASTEURIZ.
Milk Heating OK?
+85°C +52°C

Teorema Ready

> HYGIENE

Facilitated cleaning,
guaranteed hygiene

Temperature-controlled spigot

The mixture circulates continuously inside the spigot ensuring its correct operating temperature both during pasteurization and in the storage/aging phase.

Spigot always clean

The new shape makes it possible to wash the mix spout at any time, during any stage of production.

Total cleaning

The new spigot, the removable conveyor, and the one-piece cup allow for complete and easy cleaning of the machine.

The **new stainless** steel wheels can withstand frequent washing even with the most aggressive detergents.

The new stainless steel sprayer is located on the front of the machine for an easier cleaning of the cylinder and the chute, and to avoid cross maneuvers with the door. The sprayer can also be locked to facilitate handling during use.

Even the cleaning of the surfaces is quick because the **Scotch-Brite treatment** of the stainless steel makes it resistant to stains and fat residues.

Carpi Care kit

request them from your dealer to always keep your machine hygienically perfect.
